Bamboo: the fastest growing plant in the world

BAMBOO LOCKS ENORMOUS AMOUNTS OF CARBON

MOSO® BAMBOO

Panels, Beams & Veneer

With MOSO® Bamboo panels, beams and veneer a beautiful interior can be created made of naturally-grown bamboo. MOSO® Bamboo offers multiple solutions for interior projects, such as: furniture, worktops, window and door frames, kitchens, doors, stairs or wall and ceiling coverings. MOSO® Bamboo panels, beams & veneer are split into a Solid and a Supra collection. Be inspired and introduce bamboo to any interior design!

More about
Sustainability

Bamboo design

Enrich any interior project with MOSO® Bamboo panels, beams and veneer. Whether a decorative or structural solution is desired, there are numerous possibilities for each application. Similar to wood, the final look can be determined with many different finishes.

Lexus Lounge at Brussels Airport, Belgium
ARCHITECT FITCH | PHOTOGRAPHER Lior Teitler

Durable & stable

Thanks to the composition of individual bamboo strips and the positioning and direction of each layer in multiply products, MOSO® Bamboo panels and beams will shrink and swell less than most solid wood species, providing more stability. With a hardness and density similar to, or better than, the best hardwood products, they are even suitable for use in heavy duty applications. MOSO® Bamboo products are engineered to last a lifetime.

Princes Máxima Center - Utrecht, the Netherlands
ARCHITECT LIAG Architecten | PHOTOGRAPHER Lior Teitler

Versatile

MOSO® Bamboo panels, beams and veneer are available in different colours and textures, and in various sizes. Depending on the finish or surface treatment, any design can be achieved by selecting the most fitting style. MOSO® Bamboo products can be used for custom made furniture, worktops, window and door frames, kitchens, doors, stairs, wall and ceiling coverings and many more applications.

MOSO® BAMBOO

Benefits

HARD & DURABLE

With a hardness and density similar to or better than the best hardwood products, MOSO® Bamboo panels, beams and veneer are even suitable for use in heavy duty applications. All products are Brinell $\pm 4 \text{ kg/mm}^2$. High Density is exceptionally hard: Brinell $\pm 9.5 \text{ kg/mm}^2$.

HIGH STABILITY

Due to the composition of individual strips and multiple cross pressed layers, MOSO® Bamboo panels and beams will shrink and swell less than solid wood species, providing more stability.

MULTIPLE SOLUTIONS

MOSO® Bamboo products offer multiple solutions for worktops, furniture, window and door frames, kitchens, doors, stairs, wall and ceiling coverings, and many more indoor applications.

FIREPROOF

Solid Bamboo High Density as material has a fire resistance class B-s1, d0, following EN 13501-1 facilitating application in public projects.

HEALTHY

All MOSO® Bamboo panels, beams and veneer meet E05 formaldehyde emission requirements according to EN 16516 and comply with the REACH emission limit of $\leq 0.062 \text{ mg/m}^3$ for furniture and wood-based articles.

BEAUTIFUL APPEARANCE

Creates a beautiful, natural look. Final appearance can be determined with many different finishes.

ENDLESS RESOURCE

Made from bamboo, one of the fastest growing plants on Earth. Each stem can be harvested after 4-5 years, and the plant continues to grow. There is no deforestation.

STORED CARBON

Due to the fast growth - and related high yields - bamboo locks far more carbon in durable products compared to wood species.

More about
Bamboo benefits

“Bamboo is one
of the fastest
growing plants
on Earth”

MOSO® BAMBOO

From plant to product

STEM TO STRIP

After harvesting, the MOSO® Bamboo stems are split and the outer and inner skins are removed. The untreated strips have a yellowish colour (Natural) but can be lightly steamed, reducing the yellowish tone (Ecru) or more intensely steamed for a warm brown colour (Caramel).

STRIP TO PRODUCT

After treating and drying, the strips are ready to be joined in several ways to make the final product:

High Density

Strips are crushed, compressed and glued under high pressure, creating a random line pattern. The result is even harder than the best tropical hardwood species.

Side Pressed

Strips are placed vertically and glued together to create a narrow line pattern with the bamboo nodes visible in a subtle way.

Plain Pressed

Strips are placed horizontally and glued together to create a wide line pattern with the characteristic bamboo nodes clearly visible.

Extra hard

In this brochure, High Density is indicated by a hammer.

MOSO® BAMBOO

Solid collection

MOSO® Bamboo offers a very broad assortment of solid bamboo panels and beams in various sizes, thicknesses, colours and textures. These products have been used worldwide in various applications, including door and window frames, stairs, ceilings, pillars, curtain walls, furniture, kitchens and doors.

Solid beams

MOSO® BAMBOO

N-finity

CONSTRUCTIVE BAMBOO FOR INTERIOR APPLICATIONS

MOSO® Bamboo N-finity Solid beams are developed for structural interior applications which make them ideally suited for curtain walls and window and door frames, among others. The bamboo strips are connected with a special patented hook connection - creating the possibility to make very long lengths. MOSO® Bamboo N-finity is the first bamboo material that is certified with an Approval for Structural Applications by the German Institute for Construction technique (DIBt). The beams are available on request in the maximum dimensions of 200 x 120 x 12000 mm.

Sustainable

MOSO® Bamboo products offer clear sustainability advantages. The inclusion of MOSO® Bamboo products contributes to a higher LEED, BREEAM, Green Star, HQE and DGNB certification score for green building projects. That's one of the reasons MOSO® Bamboo products can be found in many sustainable reference projects all over the world. Furthermore, all standard, solid MOSO® Bamboo products are FSC® certified.

UNSURPASSED GROWING SPEED

Bamboo: the fastest growing plant in the world.

Because of the fast growth, Moso bamboo is managed as an agricultural crop: the annual harvest of the 4-5 year old stems – compared to 60-80 years for tropical hardwood! – provides a steady annual income to farmers and stimulates the bamboo plant to reproduce even faster. Therefore, by default no deforestation occurs with production of MOSO® Bamboo products, while large amounts of carbon are captured in the bamboo forests and products (www.inbar.int/understanding-bamboos-climate-change-potential).

HARVESTING AGE (YEARS)

CONSTRUCTION STORED CARBON

Bio-based materials act as CO₂ sinks. Through photosynthesis, plants absorb carbon dioxide (CO₂) from the atmosphere and convert it into glucose and other organic compounds, effectively storing carbon in plant biomass. The captured CO₂ is stored in the material for the lifetime of the product, and even longer if the product is recycled into new, durable products. Due to the fast growth - and related high yields - Moso bamboo locks far more CO₂ in durable products compared to wood species. The locked amount of CO₂ equivalent can be calculated rather

simply by looking at the density of the material and taking into account the biobased content. For example, MOSO® Bamboo High Density Products lock just over 1.660 kg CO₂ per m³ of bamboo, which is the equivalent of the CO₂ emissions of 14.000 km driven by a mid-range car. As long as the MOSO® Bamboo Products are in use, they can act as a temporary carbon store (Construction Stored Carbon).

The CO₂ emissions, bamboo absorption & carbon storage

CO₂ STORAGE VS. CO₂ EMISSIONS DURING PRODUCTION AND TRANSPORT

in kg CO₂ eq/m³ material
*Data abiotic materials from Idemat database TU Delft (industry averages).

Building the future with bamboo

About MOSO® Bamboo

Endless possibilities with MOSO® Bamboo Products:

MOSO® Bamboo develops and creates bamboo products for indoor and outdoor applications that meet the highest technical requirements and quality standards, enhance the beauty of applications and are made from the sustainable, renewable resource: Moso bamboo.

With over 25 years' experience in the relatively young bamboo industry, MOSO® Bamboo is recognised as the global A-brand in bamboo because of its focus on product quality, innovation and sustainability. With an international team and partners in more than 60 countries, MOSO® Bamboo is continuously looking for new applications and solutions that can be made with the fastest growing plant of the world. MOSO® Bamboo offers a broad assortment of bamboo products in various sizes, thicknesses, colours and textures. These products are used in various applications worldwide ranging from different types of flooring, stairs, outdoor decking, cladding, fencing, outdoor furniture, shutters and outdoor beams.

Furthermore, because of its expertise, MOSO® Bamboo is able to develop unique, customised bamboo solutions for industrial clients, meeting exceptionally stringent requirements. Through its experience, innovative attitude and world-wide network, MOSO® Bamboo is recognised as the global A-brand in bamboo products with European quality, warranty, certifications & service. The proof is the impressive list of references and clients such as Madrid Airport, Kempegowda International Airport, AkzoNobel, Texaco, Guggenheim Museum, SNCF Railway Station Gare du Nord, Iberostar, Rabobank, United Nations (FAO), and CitizenM Hotels.
